# STEVENS TRACEABILITY.

**The UK's leading provider  
of traceability systems,  
recipe formulation systems,  
weighing equipment and  
service and maintenance  
specialist.**

Stevens Traceability is a privately owned, ISO-accredited company who develop their own software and work strategically with manufacturers looking to improve efficiencies and comply with legislative requirements using weight-based traceability and quality management systems.

Est.  
1844

# OUR VISION.

**To provide traceability systems which can be implemented in stages, meeting customers' needs and budgets.**

The Stevens Traceability System is a modularised system, meaning each module can be installed independently. This gives customers greater flexibility financially, as well as more time to implement new automated processes into their businesses when required.

## Our Aim.

As a critical supplier, we are key to the operations and success of our client's businesses. We form strategic partnerships providing products and services which enable our clients to meet their business objectives.

**A leader in the weighing & traceability industry, with customer needs at the heart of product development.**

Follow Stevens Traceability Systems on LinkedIn and YouTube to stay updated on cutting-edge innovations in industrial traceability, quality control, and sustainable manufacturing practices.

[stevenstraceability.com](https://www.stevenstraceability.com)

“Not everyone wants or needs a full end-to-end traceability system or has the capital to invest in a system in one go. It's, for this reason, we have created a modularised traceability system to give manufacturers the flexibility to improve their processes in stages, not having to invest in a full end-to-end system which they may not utilise initially.”

Mike Wynburg | Managing Director

# OUR JOURNEY.

Stevens Traceability initially specialised in the manufacturing and supply of weighing equipment, however, as developments in technology evolved, Stevens created a leading recipe formulation system with weighing equipment at its core, which can be found in 90% of the largest bakeries in the UK.

Additionally, with changes in legislation in the food and beverage industry, customers required a tool to evidence traceability in their food production process.

Led by our customer requirements and legislation, the Stevens end-to-end traceability system was born.

stevenstraceability.com

Dynamic is a full end-to-end paperless traceability system covering every aspect of your business from goods-in to despatch and waste. The Stevens Traceability System ensures ingredients are weighed and traced accurately and consistently using our software, terminals and weighing equipment. With weight control at the centre of the system, costly giveaway and out-of-specification batches are minimised. The system can also be used for portion control. Designed and supported in-house, the Dynamic traceability system provides quick reports to suit BRC and SALSA audit programmes, demonstrating full traceability and producing mass balance reports at the touch of a button. The Dynamic system can also offer in-line and off-line check-weighing appropriate to the latest average weight legislation.

# SOFTWARE MODULES.

## Management.

The Stevens Management System puts you in complete control of all aspects of your production and stock environment.

## Reports.

The Reports module allows users to track and monitor all aspects of your production line, with many different configurable reports available including stock and waste.

## Stock.

Stock can handle your day to day stock management, including booking in stock, adjusting stock, adding purchase orders and moving stock.

## Production.

Production covers all aspects of the production environment including recipe weigh-up, allergen control, portion control, packaging and more.

## Waste.

Waste Dynamic enables recording and reporting of waste produced, including wet and dry ingredients, location, reason and batch number.

## Average Weight.

Average Weight allows you to weigh samples to satisfy average weight guidelines and gives warnings to control batch deviation.

## Despatch.

Within Despatch, operations such as picking and despatching sales orders are undertaken.

## Integration Service.

Stevens Dynamic Traceability System can be integrated into many back-office systems such as Sage, SAP, Tropos, Access, Navision and many more.

# WEIGHING EQUIPMENT AND SUPPORT.

## Efficient Weighing Solutions.

From bench scales, platform scales and pallet truck scales, through to indicators and balances, we supply a range of weighing equipment to support commercial weighing operations. In addition, we provide average weight terminals and in-line checkweighers to ensure product consistency for quick and effective check-weighing to meet with regulatory compliance and quality requirements.

## How We Support Your Business.

Our in-house software team enhances the traceability system and provides training with 24/7 phone support. Stevens' field engineers cover the UK and Ireland, offering maintenance, calibration (standard and UKAS), validation, and one-off repairs. Our Service division provides 5 levels of service contracts to protect against breakdowns, tailored to your business needs.

“ One of the major advantages of the Stevens Traceability system is just how user-friendly it is. Our staff are there to do a job and the easier we can make it for them to complete the tasks in hand, the happier the staff and the more productive they become.

We have a diverse team made up of different nationalities and levels of IT know-how so training our staff needs to be quick and effective. With the Stevens Traceability system there are no issues whatsoever with training staff due to the large screens, simple interface and jargon-free instructions. We've had a business relationship with Stevens Traceability for over 13 years and throughout this time the level of service has been first class. The team are extremely knowledgeable and work with us to ensure that the system grows as we grow, whilst adapting to changes in compliance criteria, technology and people. ”

# Macleane's

— HIGHLAND BAKERY —

“ As an exporter we are audited annually by the BRC (British Retail Consortium) to BRC Food Technical Standards which is in place to evaluate manufacturers of food products and the suppliers they in turn use to provide the ingredients. We can't export without passing the BRC audit as it's seen as a pre-requisite for trading internationally. Without Stevens Traceability System we wouldn't be exporting, and we certainly wouldn't be supplying many of the brands we now work with. The system provides us with all the traceability information we need at the touch of a button, streamlining both the production and audit process ”

G. Shewan - Maclean's Highland Bakery

“ I really appreciate quick response and professional approach regarding our scales, so I can safely say the feedback is very positive. ”
